Elements of Military Art and Science, or Course of Instruction in Strategy, Fortification, Tactics of Battles, of Embracing the Duties of Staff, ... Artillery, and Engineers (Classic Reprint) H. Wager Halleck

The following pages were hastily thrown together in the form of lectures, and delivered, during the past winter, before the Lowell Institute of Boston. They were written without the slightest intention of ever publishing them; but several officers of militia, who heard them delivered, or afterwards read them in manuscript, desire their publication, on the ground of their being useful to a class of officers now likely to be called into military service. It is with this view alone that they are placed in the hands of the printer. No pretension is made to originality in any part of the work; the sole object having been to embody, in a small compass, well established military principles, and to illustrate these by reference to the events of past history, and the opinions and practice of the best generals. Small portions of two or three of the following chapters have already appeared, in articles furnished by the author to the *New York and Democratic Reviews*, and in a Report on the Means of National Defence, published by order of Congress. H. W. H. May, (Typographical errors above are due to OCR software and don't occur in the book.)
